

Construction standards galvanized pipe scaffolding galvanised scaffold tube

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: China
- Brand Name: Bythai Scaffolding
- Certification: SGS
- Model Number: BT01
- Price: \$5-\$18
- Packaging Details: In bundles
- Delivery Time: 7-15 days
- Payment Terms: TT/LC
- Supply Ability: 1000tons per month

Product Specification

- Thickness: 3.2mm
- Name: Galvanised Scaffold Tube
- Surface Treatment: Galvanised
- Material: Galvanised Steel
- Application: Scaffolding
- Diameter: 48.3mm
- Standard: EN39
- Weight: 6.4kg/m

Product Description

Product Description:

Galvanised Scaffold Tube

Galvanised Scaffold Tube is a type of stainless steel pipe that is commonly used in construction and building projects. It is a key component in scaffolding systems, providing support and stability for workers and materials at elevated heights. With a yield strength of 245N/mm² and a tensile strength of 420N/mm², Galvanised Scaffold Tube is a strong and durable option for scaffolding. It can withstand heavy loads and harsh weather conditions, making it a reliable choice for construction projects of all sizes. One of the main features of Galvanised Scaffold Tube is its galvanised coating. This process involves coating the steel pipe with a layer of zinc, which helps to protect it from corrosion and rust. This makes it suitable for use in outdoor environments, where it may be exposed to moisture and other elements. In addition to its strength and corrosion resistance, Galvanised Scaffold Tube is also known for its versatility. It can be easily cut and welded to fit specific project requirements, making it a popular choice among contractors and builders. It is also compatible with a wide range of scaffold components, allowing for easy assembly and customization. The diameter of Galvanised Scaffold Tube is 48.3mm, which is a standard size for scaffolding systems. This ensures compatibility with other scaffold components and makes it easy to find replacement tubes if needed. Galvanised Scaffold Tube is primarily used in scaffolding applications, providing a safe and stable platform for workers to perform tasks at elevated heights. It is also commonly used in other construction projects, such as building facades, bridges, and temporary structures. In summary, Galvanised Scaffold Tube is a strong, versatile, and corrosion-resistant option for scaffolding and other construction projects. Its high yield and tensile strength, along with its galvanised coating and compatibility with scaffold components, make it an essential component in any building or construction project.

Features:

Product Name: Galvanised Scaffold Tube

Diameter: 48.3mm

Yield Strength: 245N/mm²

Material: Galvanised Steel

Weight: 6.4kg/m

Product Features:

Steel tubes for durability and strength

48.3mm pipe scaffold tube for easy assembly and compatibility with standard fittings

Galvanized coating for corrosion resistance and long-lasting use

High yield strength of 245N/mm² for added safety and stability

Lightweight design for easy transportation and installation

Technical Parameters:

Name	Galvanised Scaffold Tube
Material	Galvanised Steel
Diameter	48.3mm
Thickness	3.2mm
Surface Treatment	Galvanised
Weight	6.4kg/m
Standard	EN39
Application	Scaffolding
Yield Strength	245N/mm ²
Tensile Strength	420N/mm ²

Applications:

Galvanised Scaffold Tube - Bythai Scaffolding

The Galvanised Scaffold Tube, also known as tube scaffolding, is a versatile and essential product for construction and building purposes. Manufactured by Bythai Scaffolding in China, it is made of high-quality steel and pipe materials, making it durable and reliable for various applications.

With its model number BT01 and brand name Bythai Scaffolding, this Galvanised Scaffold Tube has been certified by SGS, ensuring its quality and safety standards. The price range for this product is between \$5 to \$18, depending on the quantity ordered, making it affordable for different budget levels.

Application and Usage

The Galvanised Scaffold Tube is primarily used in construction and building projects. It is commonly used for the assembly of scaffolding structures, providing support and stability to workers and materials during construction. Its versatility allows it to be used in various types of construction, such as residential, commercial, and industrial buildings.

Additionally, this product is also used in other applications such as temporary structures, stage and event setups, and bridge construction. Its strength and durability make it suitable for heavy-duty and long-term usage.

Product Features

One of the main features of this Galvanised Scaffold Tube is its diameter of 48.3mm, making it compatible with various scaffolding components and fittings. It has a high tensile strength of 420N/mm² and a yield strength of 245N/mm², ensuring its ability to withstand heavy loads and pressures.

It also meets the standard EN39, which guarantees its quality and compliance with international standards. This ensures that the product is safe to use and can withstand different weather conditions and environments.

Packaging and Delivery

Bythai Scaffolding packages the Galvanised Scaffold Tube in bundles for easy transportation and storage. It has a supply ability of 1000 tons per month, ensuring a steady and timely delivery of the product to customers. The estimated delivery time is between 7-15 days, depending on the location and quantity ordered.

Payment Terms

To facilitate a smooth transaction, Bythai Scaffolding offers flexible payment terms for its customers. They accept payments through TT (Telegraphic Transfer) or LC (Letter of Credit), providing convenient options for international customers.

Conclusion

The Galvanised Scaffold Tube from Bythai Scaffolding is a reliable and essential product for any construction and building project. Its high-quality materials, compliance with standards, and versatile applications make it a popular choice among contractors and builders. With its affordable price range and flexible payment terms, it is a cost-effective solution for all scaffolding needs.

So why wait? Get your Galvanised Scaffold Tube from Bythai Scaffolding today and experience its strength and stability for yourself!

Packing and Shipping:

Galvanised Scaffold Tube Packaging and Shipping

Our Galvanised Scaffold Tube is carefully packaged to ensure safe delivery to our customers. Each tube is wrapped in protective material to prevent any scratches or damage during transit.

To further protect the tubes, we use sturdy cardboard boxes for packaging. These boxes are strong enough to withstand the weight of multiple tubes and provide additional protection during shipping.

For international orders, we use pallets to securely bundle and ship the tubes. The pallets are then wrapped with plastic film to prevent any movement or damage during transportation.

Once your order is complete, we will arrange for the tubes to be shipped to your desired location using trusted and reliable shipping services. We strive to deliver your order in a timely and efficient manner.

Thank you for choosing our Galvanised Scaffold Tube. We hope you are satisfied with our packaging and shipping methods.
