

Scaffolding Ringlock Accessories Steel Plank For Construction Aluminium Steel Plank

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: China
- Brand Name: Bythai
- Model Number: BM205
- Minimum Order Quantity: 1000
- Price: 4.5-8.5
- Packaging Details: In bundles
- Delivery Time: 10-15
- Payment Terms: container, shipping, L/C, T/T

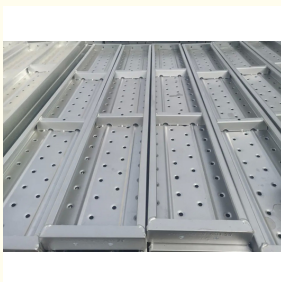

Product Specification

- Usage: Scaffolding
- Place Of Shipment: China
- Material: Steel
- Surface: Pre-galvanized/hot Dip Galvanized/Spray Plastic
- Packaging: Container
- Length: Customized
- Highlight: **Aluminium Steel Plank,
Scaffolding Ringlock Accessories Steel Plank,
Construction Aluminium Steel Plank**

Product Description:

The steel plank for scaffold is an essential component for any construction or maintenance project requiring elevated work platforms. Manufactured from high-grade steel, this scaffolding plank provides robust support for workers and materials. Designed for use in scaffolding systems, the plank can be seamlessly integrated with various scaffold structures, ensuring a reliable and safe working surface. Each steel plank is meticulously crafted to suit the rigorous demands of construction environments. The material choice for the planks is steel, known for its durability and strength. This ensures that the plank can withstand the weight and stress of daily use, resisting bending or warping over time. Steel's longevity also means that these planks are a cost-effective investment, as they can be reused across multiple projects with minimal wear and tear.

Our steel plank scaffold products are incredibly versatile and are suitable for a wide array of scaffolding applications. Whether for residential building projects, commercial construction, or industrial maintenance, these planks provide a firm footing and stable surface for workers to perform their tasks efficiently and safely. The steel frame for the decking plank is designed to lock securely into place, creating a continuous work platform without gaps or unevenness.

The surface treatment of these scaffolding planks is customizable based on the specific needs of the project. Options include pre-galvanized, hot-dip galvanized, and spray plastic finishes. Pre-galvanized and hot-dip galvanized surfaces offer excellent protection against corrosion and rust, making them ideal for outdoor or harsh environments. The galvanization process provides a barrier that extends the life of the plank significantly. Alternatively, the spray plastic option provides a different type of protective layer that can be color-coded for safety or organizational purposes. This versatility in surface treatment ensures that the steel plank can be tailored to the specific conditions of a given worksite.

Technical Parameters:

Attribute	Details
Usage	Scaffolding
Packaging	Container
Surface	Pre-galvanized/Hot Dip Galvanized/Spray Plastic
Place of Shipment	China
Material	Steel
Length	Customized
