

Non slip surface steel staging plank scaffolding platform constructed from heavy gauge steel ensuring safety and durability on job sites

Basic Information

- Model Number: BT205

Product Specification

- Durability: Weather Resistant / Corrosion Resistant
- Surfacetreatment: Anti-slip / Painted / Galvanized

Product Description:

The galvanized steel scaffolding plank is an essential component designed to provide a safe and sturdy platform in various scaffolding systems. Manufactured using high-quality materials such as Q195, Q235, and Q355B steel, this scaffolding steel plank ensures exceptional strength, durability, and reliability, making it an ideal choice for construction, maintenance, and industrial applications. The use of these premium-grade materials guarantees that each plank can withstand heavy loads and harsh working conditions, thereby enhancing overall safety on the job site.

One of the key features of this steel plank with hook is the availability of different edge types to suit diverse project requirements. Customers can choose between rounded and square edge profiles, depending on the specific needs of their scaffolding setup. Rounded edges offer smoother finishes and are less likely to cause injuries during handling or installation, while square edges provide a more precise fit and increased grip when placed within the scaffolding frame. This versatility allows for seamless integration with various scaffolding systems, ensuring compatibility and ease of use.

The galvanized steel scaffolding plank undergoes a rigorous anti-corrosion treatment that significantly extends its service life. The galvanization process involves coating the steel surface with a protective layer of zinc, which acts as a barrier against rust, moisture, and other corrosive elements commonly encountered on construction sites. This treatment not only preserves the structural integrity of the scaffolding steel plank but also reduces maintenance requirements and replacement costs, making it a cost-effective solution for long-term projects.

Thickness is another critical attribute of this steel plank with hook, available in a range from 25mm to 40mm. This variation allows users to select the appropriate thickness based on the expected load capacity and application environment. Thicker planks offer enhanced rigidity and support, making them suitable for heavy-duty tasks and high-traffic areas. Conversely, thinner planks provide lighter weight and easier handling without compromising safety, ideal for smaller-scale or less demanding operations. This flexibility in thickness ensures that the galvanized steel scaffolding plank can meet a broad spectrum of performance requirements.

Designed with practicality and safety in mind, the steel plank with hook features secure hooks that facilitate quick and reliable attachment to the scaffolding structure. These hooks ensure that the planks remain firmly in place during use, preventing accidental slips or displacements that could jeopardize worker safety. The ease of installation and removal also contributes to improved efficiency on the worksite, enabling faster assembly and disassembly of scaffolding platforms.

In summary, the galvanized steel scaffolding plank represents a robust, versatile, and reliable solution for scaffolding systems across various industries. Its construction from high-quality Q195, Q235, and Q355B materials, combined with specialized anti-corrosion treatment, ensures long-lasting performance even in challenging conditions. The availability of rounded and square edge types offers customization to match different project demands, while thickness options ranging from 25mm to 40mm provide adaptability for various load capacities. Additionally, the integrated hooks enhance safety and ease of use, making the scaffolding steel plank an indispensable element for any scaffolding setup. Whether for construction, maintenance, or industrial applications, this steel plank with hook guarantees a safe, durable, and efficient working platform.

Features:

Product Name: Scaffolding Plank

Load Capacity: 200kg - 500kg

Installation Method: Hook-on

Safety Features: Non-slip Surface, Reinforced Edges

Surface Treatment: Anti-slip, Painted, Galvanized

Thickness: 25mm - 40mm

Designed as a steel staging plank for enhanced durability and safety

Includes scaffolding steel walking planks hook for secure attachment

Steel plank with hooks suitable for various steel catwalk scaffold applications

Technical Parameters:

Load Capacity	200kg - 500kg
Place Of Shipment	China
Width	200mm - 300mm
Structure	Solid
Surface Treatment	Anti-slip / Painted / Galvanized
Application	Scaffolding System
Product Type	Thickness Of Scaffolding Pipe
Materials	Q195, Q235, Q355B
Durability	Weather Resistant / Corrosion Resistant
Installation Method	Hook-on

Applications:

The Bythai Scaffolding Plank, model number BT205, is a versatile and durable solution designed to meet the demanding needs of

construction and industrial work environments. Manufactured in China and certified by SGS and ISO, this scaffolding plank ensures high quality, reliability, and safety for various applications. Available in a minimum order quantity of 1000 units, the BT205 is competitively priced between \$15.5 and \$85.5, making it an economical choice for large-scale projects.

This steel plank scaffold is crafted from premium materials including Q195, Q235, and Q355B steel, providing excellent strength and load-bearing capacity. Its surface options include pre-galvanized (HGD), anti-slip, painted, or fully galvanized finishes, which contribute to the plank's weather-resistant and corrosion-resistant properties. These features make the plank suitable for use in both indoor and outdoor environments, even under harsh weather conditions.

The galvanized steel plank comes with either rounded or square edge types, enhancing safety by minimizing sharp edges and reducing the risk of injury during handling and installation. Additionally, the steel plank with hooks design facilitates quick and secure attachment to scaffolding frames, improving setup efficiency and stability on site.

Typical application occasions for the Bythai BT205 scaffolding plank include residential and commercial building construction, bridge and infrastructure projects, maintenance and repair work, and industrial installations. Its robust construction and anti-slip surface treatment make it ideal for workers operating at height, providing a secure footing and reducing the chance of accidents.

Packaging details consist of bundled units, which simplifies transportation and storage. The delivery time ranges from 10 to 15 days, depending on the order size and shipping arrangements. Payment terms typically involve container shipping, catering to bulk purchase requirements and ensuring smooth logistics for international clients.

In summary, the Bythai BT205 scaffolding plank is a reliable, high-quality product tailored for various scaffolding applications. Its combination of durable steel materials, corrosion-resistant surface treatments, and user-friendly design features like hooks and edge options make it an essential component for safe and efficient scaffolding systems worldwide.

Customization:

Bythai offers customizable steel scaffolding plank solutions tailored to meet your construction needs. Our galvanized steel scaffolding plank, model number BT205, is manufactured in China and certified by SGS and ISO, ensuring top quality and reliability.

We provide a minimum order quantity of 1000 pieces, with prices ranging from \$15.5 to \$85.5 per unit. Each plank is carefully packaged in bundles to ensure safe delivery.

Our galvanized steel scaffolding plank is made from high-quality materials including Q195, Q235, and Q355B steel, offering superior durability with weather resistant and corrosion resistant properties. You can choose from widths of 200mm to 300mm and select the edge type that suits your project, either rounded or square.

The delivery time for your customized order is typically between 10 to 15 days, with flexible payment terms available for container and shipping arrangements.

Trust Bythai for premium steel scaffolding plank products that combine strength, safety, and customization to support your construction projects efficiently.

Support and Services:

Our Scaffolding Plank product is designed to meet the highest standards of safety and durability for construction and maintenance work. To ensure optimal performance and longevity, please follow the recommended usage guidelines and maintenance procedures.

For technical support, our team of experts is available to assist you with installation advice, load capacity information, and compliance with safety regulations. We provide detailed product specifications and user manuals to help you make the most of your scaffolding plank. Regular inspection and proper cleaning of the scaffolding plank are essential to maintain its structural integrity. Avoid exposure to harsh chemicals and extreme weather conditions to prolong the lifespan of the product.

Should you require replacement parts or additional accessories, please refer to the product catalog or contact our support team for assistance. We are committed to providing reliable service and ensuring your complete satisfaction with our scaffolding solutions.

Thank you for choosing our Scaffolding Plank. We are dedicated to supporting your project needs with quality products and professional service.
