

Painted Scaffolding Plank Offering Multiple Thickness Options of Scaffolding Pipe Ensuring Stability and Safety Shipment Asia

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: China
- Certification: SGS,ISO
- Minimum Order Quantity: 1000
- Price: 15.5-85.5
- Packaging Details: In bundles
- Delivery Time: 10-15
- Payment Terms: container, shipping

Product Specification

- Surface: Pre-galvanized/HGD
- Structure: Solid
- Thickness: 25mm - 40mm
- Installation Method: Hook-on
- Safetyfeatures: Non-slip Surface, Reinforced Edges
- Loadcapacity: 200kg - 500kg

Product Description:

The Scaffolding Plank is an essential component designed to provide a safe and reliable working platform for various construction and maintenance projects. Manufactured with precision and high-quality materials, this steel plank is engineered to meet the rigorous demands of industrial applications. Available in widths ranging from 200mm to 300mm, the scaffolding plank offers versatility and adaptability for different scaffolding setups and requirements.

Constructed from premium-grade steel materials including Q195, Q235, and Q355B, the steel plank ensures exceptional strength, durability, and resilience under heavy loads. These materials are carefully selected to deliver optimal performance in demanding environments, making the steel plank an ideal choice for professionals seeking long-lasting and robust scaffold components. One of the standout features of this steel plank is its enhanced safety design. The plank incorporates a non-slip surface, which significantly reduces the risk of slips and falls, providing workers with a secure footing even in wet or oily conditions. Additionally, the reinforced edges of the plank add an extra layer of protection, preventing deformation and ensuring the structural integrity of the plank during use. These safety features make the steel plank with hooks steel catwalk scaffold an indispensable element for maintaining workplace safety standards.

The steel plank for scaffold is treated with advanced anti-corrosion processes to withstand harsh environmental conditions and extend its service life. This treatment is particularly important for scaffolding components exposed to outdoor elements such as rain, humidity, and chemicals, as it prevents rust and corrosion, maintaining the plank's appearance and structural soundness over time.

Designed for easy installation and compatibility, the steel plank with hooks can be securely attached to various scaffold systems, providing a stable and reliable platform for workers. The hooks ensure a firm connection to the scaffold frame, preventing any unwanted movement or detachment during operation. This feature enhances the overall stability of the scaffold structure, contributing to a safer working environment.

Manufactured and shipped directly from China, the scaffolding plank benefits from streamlined production processes and competitive pricing without compromising on quality or performance. The place of shipment being China ensures efficient logistics and accessibility for customers worldwide, supporting timely project execution and delivery.

Whether used in construction, maintenance, or industrial settings, the steel plank for scaffold offers a perfect balance of strength, safety, and durability. Its wide range of widths from 200mm to 300mm caters to diverse project needs, while the selection of high-quality steel materials (Q195, Q235, Q355B) guarantees the plank's ability to withstand heavy-duty applications. The anti-corrosion treatment further enhances its reliability, making it a cost-effective and long-lasting solution.

In summary, this steel plank is a versatile and dependable scaffold accessory designed to improve safety and efficiency on the job site. Its non-slip surface and reinforced edges provide essential safety benefits, while the robust materials and anti-corrosion treatment ensure durability and longevity. The steel plank with hooks steel catwalk scaffold is a smart investment for any professional looking to enhance their scaffolding system with a high-quality steel plank that delivers outstanding performance and safety.

Features:

- Product Name: Scaffolding Plank
- Durability: Weather Resistant and Corrosion Resistant
- Installation Method: Hook-on for easy and secure attachment
- Edge Type: Available in Rounded and Square edges
- Surface Treatment: Anti-slip, Painted, and Galvanized finishes
- Safety Features: Non-slip Surface and Reinforced Edges for enhanced safety
- Ideal for use as scaffolding steel walking planks hook systems
- Designed as steel plank with hooks steel catwalk scaffold solutions
- High-quality steel plank ensuring durability and safety on scaffold structures

Technical Parameters:

Product Type	Thickness Of Scaffolding Pipe
Width	200mm - 300mm
Load Capacity	200kg - 500kg
Safety Features	Non-slip Surface, Reinforced Edges
Surface	Pre-galvanized/HGD
Installation Method	Hook-on
Materials	Q195, Q235, Q355B
Structure	Solid
Treatment	Anti-corrosion
Place of Shipment	China

Applications:

The Bythai Scaffolding Plank, model number BT205, is a high-quality solid structure plank designed specifically for construction and industrial applications. Manufactured in China and certified by SGS and ISO, this scaffolding plank guarantees superior durability and

safety for workers operating at various heights. With thickness options ranging from 25mm to 40mm and a robust load capacity between 200kg and 500kg, it is engineered to support heavy weights while maintaining stability and reliability on site.

One of the key applications of the Bythai BT205 scaffolding plank is in the assembly of scaffolding systems where a secure walking platform is essential. Featuring compatibility with scaffolding steel walking planks hook systems, this plank ensures quick and secure attachment, minimizing downtime and enhancing worker safety. The solid structure combined with weather-resistant and corrosion-resistant materials makes it ideal for outdoor construction projects exposed to harsh environmental conditions such as rain, wind, and humidity.

The Bythai scaffolding plank is also widely used in industrial maintenance, bridge building, and renovation tasks where a sturdy and reliable platform is critical. Its packaging in bundles allows for convenient transportation and storage, while the delivery time of 10-15 days ensures timely supply for large projects. The minimum order quantity of 1000 units and pricing ranging from 15.5 to 85.5 per plank make it a cost-effective solution for contractors and suppliers managing bulk orders.

In addition to traditional wooden planks, Bythai offers alternatives such as galvanized steel plank and pierced steel planking, which provide enhanced strength and slip resistance. These options are particularly suitable for environments requiring increased durability and safety standards. The versatility of the BT205 model means it can be integrated seamlessly with various scaffolding setups, making it a preferred choice for construction professionals worldwide.

Payment terms including container shipping and flexible payment options support international buyers, with all shipments originating from China. Whether for residential building construction, commercial site development, or infrastructure projects, the Bythai scaffolding plank BT205 stands out as a reliable, certified, and weather-resistant solution that meets the demanding needs of modern scaffolding systems.

Customization:

At Bythai, we offer comprehensive product customization services for our scaffolding plank model BT205, designed to meet your specific construction needs. Our steel plank 230 is crafted with precision and treated with anti-corrosion methods to ensure maximum durability and weather resistance. Customers can choose between rounded or square edge types, with widths ranging from 200mm to 300mm to fit various scaffold configurations.

Our perforated steel plank for sale is engineered to provide superior load capacity, supporting between 200kg and 500kg, making it ideal for heavy-duty applications. We also provide options for steel plank with hooks, enhancing safety and ease of installation for steel catwalk scaffold systems.

Manufactured in China and certified by SGS and ISO, our scaffolding planks are packaged in bundles for efficient handling and shipped with flexible payment terms including container and shipping options. With a minimum order quantity of 1000 units and competitive pricing between \$15.5 and \$85.5, we ensure timely delivery within 10-15 days.

Choose Bythai for reliable, customizable scaffolding solutions that combine durability, safety, and quality to support your construction projects effectively.

Support and Services:

Our Scaffolding Plank product is designed to meet the highest standards of safety and durability. For technical support, please refer to the installation guidelines and maintenance instructions provided with the product to ensure proper usage and longevity.

If you encounter any issues or require assistance with your scaffolding plank, our technical team is available to provide expert advice and troubleshooting support. We recommend regular inspections of the planks before use to check for any signs of damage or wear.

We also offer replacement parts and accessories compatible with the scaffolding planks to help you maintain a safe working environment. Please ensure all components are used as specified to comply with safety regulations.

For additional services, we provide on-site consultation and training sessions to help your team effectively and safely utilize the scaffolding planks. Our goal is to support your projects with reliable products and responsive service.
